

Technology for a
tough environment

De-Mountable Road Marking Body

Utilising existing 'hook-mount' technology, Somerford De-Mountable Road Marking Body can be loaded, connected, and ready to use in under 30 minutes.

De-Mountable Road Marking Body

Utilising existing *hook-mount* technology, Somerford De-Mountable Road Marking Body can be loaded, connected and ready to use in under 30 minutes.

With a range of compatible body types already on the market including; gritter bodies, skip mounts, recycling units and hot boxes, a compatible prime mover can now be utilised throughout the full calendar year for numerous different applications.

The demountable body system accommodates any suitable skid-mountable equipment body type, providing the perfect multi-application solution and best value from a single fleet vehicle.

With the ability to carry out a change of vehicle use quickly and easily, work planning can be altered to accommodate unexpected programme changes such as seasonal variations, or availability of operatives.

Features:

- Multi-use single vehicle means significantly lower carbon footprint
- Rapid change system delivers operational flexibility
- All services connected at single point
- Change-over completed in under 30 minutes
- Robust design

De-Mountable Road Marking body options:

- Boiler configurations:
 - Thermoplastic
 - High Friction
 - Bituminous
 - Specialist Products
- Various on board PTO driven options available e.g. compressed air supply; 110v/440v 6kVa generator

Somerford design and build bodies for applications such as:

- Traffic management / traffic control
- Cone & signage installation
- Surface preparation
- Joint preparation
- Line removal
- Lighting support
- Line application

From Gritter to Road Marking vehicle in 30 mins
